RS Programmable timer keyboard/display legend Stock No. 335 - 182

A key and graphics panel with self-adhesive backing designed to be affixed over a sub-panel. Sub-panels should be cut as shown in the diagram below. The display cutout is designed for use with the four digit display bezel 587 - 204 which also secures the display P.C.B. (supplied with the programmable timer P.C.B. 434 - 699) behind the sub-panel. Alternatively display filter material may be fixed onto the rear of the key panel, with this assembly mounting over an oversized display cutout that gives sufficient clearance for the filter.

Connections are made with the push-fit connectors supplied which will directly mount onto the programmable timer main P.C.B.

The sub-panel must be clean and free from grease before fixture of the panel is performed.
