SLOGGERS SUMMER SAVERS

see us at the BBC ACORN USER show '89

Dear Electron owner.

GREAT NEWS...You may have been wondering what SLOGGER has been doing regarding its advertising. We have, as you know, been advertising consistantly for many years now in the Electron User magazine. In recent months we have assessed the effectiveness of expensive "Double Page spreads" by testing the "Direct mailing" method of sending details of our products directly to you, the computer user. Since the response to a limited Mailshot proved to be an overwhelming success we are now adopting this 'personal' approach with some super ideas to save you money.

Details of a selection of our products are included here together with photographs where applicable with the back page having some very attractive prices.

To start, we are offering discounts from our normal prices by anything up to 25%. Tremendous savings can be made by purchasing more than one item, and outstanding bargains and commissions are available by selling to your friends.°°

With two exciting new products under wraps you can be assured of continuing support for the Electron computer for some considerable time to come.

SEE THE BACK PAGE FOR OUR 'SUMMER SAVER' PRICE LIST.

'STARSPELL'

SPELLING CHECKER

THE definitive utility for your wordprocessor

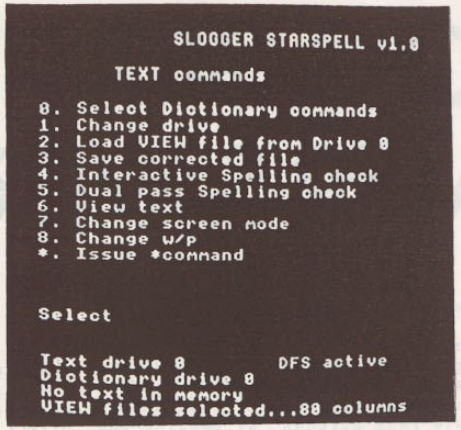
For use with either STARWORD or VIEW

STARSPELL has implemented the very latest programming techniques resulting in phenomenal checking speed

STARSPELL is for disk users only & runs under DFS or ADFS

STARSPELL will scan your letter or document in seconds

SEE OVER →



SLOGGER's STARSPELL has been designed to run on both the Electron and BBC microcomputers. From STARSPELL you simply load your text into memory and select the 'Spelling Check' function. Spelling mistakes may be corrected from STARSPELL but the word may be added to the dictionary if considered correct, similarly unwanted words can be deleted.

SLOGGER's STARSPELL will check your text in seconds by utilising an algorithm based on a 'hashing' technique, which accesses the dictionary disk supplied. The more common words are programmed into the ROM itself and so checks here take just microseconds.

STARSPELL has been designed to work with both DFS and ADFS as standard and is compatible with the ACORN ADFS and also PRES ADFS even with page at &1D00.

MAIN FEATURES
* 16K ROM and dictionary disc (see below for options)
* DFS and ADFS (both 3.5" or 5.25")
* Very fast (and I mean VERY fast)
* Disk capacity: ADFS approx 60,000, DFS approx 40,000 words
* Supports both 40 or 80 column displays
* Interactive spelling check (correct mistakes, add to disc, add to temporary store, or ignore mistake.
* Dual pass check for faster reporting
* Add words to dictionary * View text
* Browse through dictionary

STARSPELL is available in three different software formats:

1. STARSPELL 16K ROM and Dictionary disk
2. STARSPELL Cartridge and dictionary disk
3. STARSPELL & VIEW ON CARTRIDGE & DICTIONARY DISK
4. STARSPELL & STARWORD ON CARTRIDGE & DICTIONARY DISK

SPECIFY DISK TYPE AND FILING SYSTEM (3.5" or 5.25" DFS,ADFS etc)

Send original VIEW or STARWORD if combination cartridge supplied

4 CHANNEL SOUND CARTRIDGE

YES .... It's back again by popular demand, we are re-releasing the 4 Channel Sound Cartridge, giving the Electron true BBC sound and envelope capabilities.

Cased in a standard Acorn cartridge, the Sound Cartridge offers a low cost and effective solution to the very limited single channel of the Electron.

Comes complete with disk of tunes, demonstrating the versatility of this system to it's full extent through the Elk's internal speaker°

ELECTRON ON THE BLINK?

NO PROBLEM..... We have a service and repair facility which is second to none in the country.

So if you are having a problem with your trusty Elk, give us a ring. All repairs are fully guaranteed.

Additionally, we have a full range of spares for the Electron range of computers and peripherals.

P E G A S U S 4 0 0

The PEGASUS 400 Disk system has been designed to connect to an Electron Computer which has either the Slogger ROMBOX PLUS or the Acorn PLUS1. The system supplied is a standard 5.25 inch BBC disk drive with the Interface which is the WD1770. This combination ensures compatibility with the BBC disk filing system.

The PEGASUS 400 comprises of the following:

The PEGASUS Disk Interface
The PEGASUS Disk filing system ROM
400K 40/80 track software switchable 5.25inch double sided top quality drive with PSU and 2 year warranty
A 90 page comprehensive PEGASUS manual second to none
Full installation instructions
Disk drive cable

Everything, indeed, that is required to upgrade to a disk system of the highest quality.

COMPLETE PEGASUS SYSTEM PRICE: £149.50

PEGASUS DISC INTERFACE ONLY PRICE: £49.50

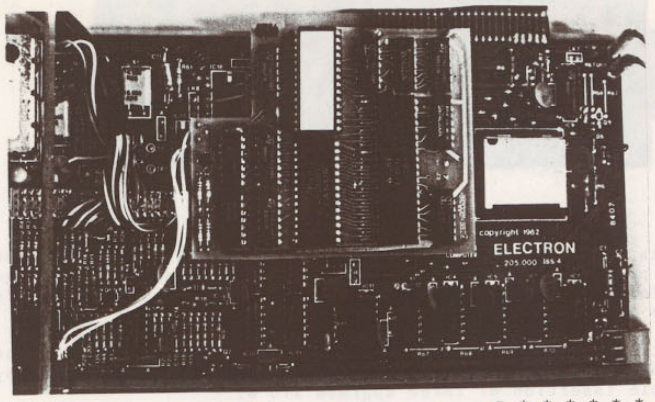
FOR CUMANA DISC INTERFACE OWNERS:

S L O G G E R E L E C T R O N D F S

A true BBC compatible DFS conversion ROM for the Cumana disk interface.

Offering all the utilities on the OS ROM, so no more utility disk to worry about, 'star' commands do it all...

OFFER PRICE ONLY: £22.95 INCLUDING MANUAL



* * * * * * M A S T E R R A M B O A R D * * * * * *

The MASTER RAM BOARD provides an extra 32k of memory to upgrade the standard Electron to a massive 64k. This unit allows the computer to operate with up to 28k free in any mode for either BASIC, Machine Code or Word Processing. This applies to ANY program which does not access the screen directly. Additional to the 28k now free to the user, yet another 12k is available as a Print Buffer using Sloggers Expansion ROM 2.0

The speed of the Master RAM allows the Electron to operate at up to 300% of its original speed. Typical improvement in text operations is 100%.

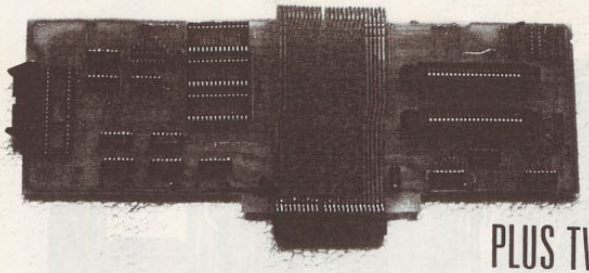
The design of the Master RAM Board ensures compatibility with all add ons such as the ROMBOX PLUS, PLUS 1 and all Electron Disk Drive systems. Software compatibility is also maintained with all good Word Processors such as VIEW and STARWORD having up to 28000 bytes free in Shadow mode. Other memory consuming programs such as STARSTORE and the complete VIEW suite are also enhanced in a similar way.

T U R B O D R I V E R

Similar to the Master RAM Board, the Turbo Driver fits into the place of original 6502, but simply provides the dramatic speed increase of up to 300%.

The ideal expansion for the dedicated games player who does not require the extra memory facility for wordprocessing, etc. The turbo is visually similar to the MRB as they both fit into the place of the Electron's 6502.

Both the MASTER RAM BOARD and the TURBO DRIVER require some soldering and de-soldering experience to fit, as the 6502 processor has to be removed from the Elk, and a socket soldered into it's place. A fitting service is available by ourselves.



PLUS TWO

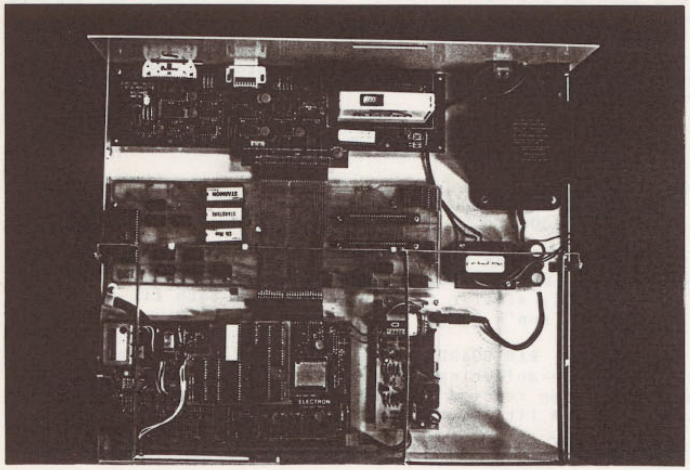
The Plus Two Interface is a new innovation for the Electron market providing users with the long awaited extra cartridge slots for those who have more cartridge slot based peripherals than the Plus 1/ Rombox + provides for.

In addition to this step forward, there are three ROM sockets and provision for a User Port option, the latter being implemented by the simple insertion of three upgrade I.C's.

Available only in kit form to support our Remote Expansion, the Plus 2 effectively makes available all the spare ROM pages accessable to the user. ie:

ROM pages 0 to 3 - Plus 1 cartridge slots
ROM pages 4 to 7 - Plus 2 cartridge slots
ROM pages 8/9 - reserved for the keyboard
ROM pages 10/11 - used by the Electron O.S.
ROM page 12 - Plus 1 Expansion ROM
ROM pages 13 to 15 - Plus 2 ROM sockets

The User Port opens the doorway to a whole new world of mouse control. At the moment it supports Graphics applications such as Stop Press and the Picasso package (which is a major step in itself), but a host of other applications are coming - Video Digitisers, EPROM programmer, Robot & Turtle control, etc.



THE RX

Our Remote Expansion Unit is the answer to many problems that have existed around the expanding the Electron. UNTIL NOW

If your Electron has been expanded from its basic form, even by the purchase of a Plus 1 / Rombox + and a Disk System, the amount of space on the desktop by ribbon cables, mains wires, etc, not to mention the power units and mains socket assembly dangling in a tangle somewhere out of sight, can be most frustrating at times.

The RX unit must be the answer. The existing Electron itself remains as a keyboard unit which has a neat cable usually 1 metre long but can be as much as 5 metres long connecting to the computer parts which are now housed in the RX case. With such flexibility the computer box could even be tucked away neatly under or to the side of a desk giving very much more space.

Supplied with the unit is a fully buffered keyboard cable. The buffering ensures that the length of the cable does not affect the basic computer operation.

The basic RX kit can be supplemented by a number of options available, including: Disk Drive support kit, Drive access blanking plates, and other hardware, and of course the PLUS 2.
